

Columbia University
Biomaterials Day - March 27, 2010

The Biomaterials Day at Columbia University was a symposium focusing on the state-of-the-art biomaterials-related research that is being performed in the northeastern United States. This event provided an excellent forum for researchers, physicians, students, and industry representatives to examine this critical research area. The Biomaterials Day coincided with the Northeast Bioengineering Conference (NEBEC) being held at Columbia University from March 26-28th which included an entire day featuring a biomaterials-specific session on March 27th. In collaboration with the NEBEC, the Biomaterials Day attracted a large number of presentations and posters focusing on biomaterials endeavors. In addition to lectures by leading researchers in the northeast region, events included student poster presentations and lectures submitted by senior undergraduates and graduate students, workshops, networking events and more.
